### **ABSTRACT**

*In human beings life teacher plays major role along with parents, from ancient era, teacher was one of the directors of human life, without teacher his / her life would incomplete one. In each and every field, such as war, archery, medicine, agriculture etc. Teacher's role is very important one without teacher we can't learn anything. For the proper guidance teacher's place is important. In the epic "Mahabharata" Pandva learnt each and every things from Dronacharya, without Dronacharya they could not get an archery knowledge. Teacher teaches moral things and way of life to the students. When we think that what do you mean by education? The educational psychologist interpreted that, "Education" means to change in behaviour, change in thinking and way of life of human being. Education means not only for an employment purpose and getting money but its main purpose is to create and to develop good human being, good society and good nation.*

Due to the education, human being learns moral things and disciplines, equality and fraternity, love and sympathy it means mental development and physical development, psychological development and emotional development take place during the process of education. But now a day there is a lack of emotional development, it is very important factor, in this modern technological computerised and mobilized global world. Each and every human being wants well settled life and self protection, after well settlement they forget others emotions, needs and responsibilities of society and nation. They only attract towards the materialistic world, because each and every human being's behaviour becomes materialistic one. This materialistic views of human being, creates stereotyped life style and the self-centred attitude. This selfish view gets water and food to the materialistic world. In loneliness the question creates in my mind, what factors are responsible for this material world? The tentative responsive answer occurs in my mind that, there are many factors responsible for these materialistic views, one of them, the westernized culture and life style and thinking of educational systems. Every parent admitted their kids in English medium school, though our mother tongue is Marathi (regional dialect) government used to free primary education to one and all primary candidates but the parents want their kid must learn

in English medium only because it is an international language, due to this their kid will get good quality education, good English knowledge and that's why they predict that their child will get good job in future or they can stand on their own legs easily. But actual fact is different; according to some psychologist human being can learn by the teaching learning process as observing and practising only. For this student must present psychologically, mentally and physically in the class while teacher teaching in the class. Bilingual teaching method (Mother tongue and English) used in English medium school by the teacher. Only English medium label is there.

Teacher and student use their mother tongue out of the class as a communication. Maximum English medium schools are from the private sector, these schools are not knowledge oriented but exam oriented. Parents become happy while they seeing the marks and percentage of their child. These marks and percentage belong to the rote-learning of their kids. What actually primary students need the English medium teacher can't give the students. In childhood students want freedom and freeness. Student's creativity does not development in the dictatorship of English medium school. This may be the reason that, student's emotional development and social development not take place. When student's emotional development and social development not take place then they have not sympathy and empathy towards their parents and society as well as the nation. Even though English medium teachers are also not responsible for these conditions because maximum teachers not eligible as a teacher, they have not got any government training which government school teacher got month after month at district level place. English teacher get meagre payment per month in this payment their basic needs do not completed. School president does not give scale and grade pay though he takes fees and donations from the parents year by year. Whatever the core components moralities is included in the texts, English medium teacher do not inculcate the student. We can't expect the love for parent, society and Nation from the English medium students.

At home even parents do not use English words and language to communicate the child. They use mother tongue with their child. How we can expect from the Indian student fluent in English those who are belong to medium class. Regional dialect schools are very important at student's primary level class. Mother tongue help student to understand each concept by heart easily in the class. In daily used language student observe and differentiate things and understand concept easily. That's why primary base knowledge and student's love for school, parent, society and Nation develop in the student side by side core components moralities inculcate the student.
