technological and, to some extent, aesthetic factors. It is a sobering thought that every man-made object of practical utility has passed through the process of conception, testing, design, construction, refinement, to be finally brought to a serviceable state suitable for the market. (McNeil, 1)

The world's population is generally divided into two developmental factors that are urban and rural factor and both factors are changing fast in day and night. All these changes are only possible by the new technological ideas and inventions. Flood of technology has empowered everything by its new idea of change and through easy techniques. The technology has brought huge change in the climatic and geographical fields. It has invented new electronics, gadgets, smart phones, palmtops and laptops and also enhanced other information and communicational facilities. Since the inception of the new knowledge the new ideas and new type of thinking is also on the way for the purposive change and empowered development of the society. The present age is the age of technology and apps world where an individual is likely to access the whole world from his/her hand with the help of smart phone screen. This is an overview to present the short and critical summary of the society and literature through technology.

Society through Technology

The technology has changed the whole society into a global society every type of society is accessible through the latest techniques and new inventions of technology. Every type of change occurred under the one umbrella that is the development of technology. Technology has made we people tied together with one nation, one region and one idea. What happened in the society and is happening in the society and will be happening in the society all that are occurred due to the two grand paired factors one is nature and the second is man. The nature is always with us and the man has changed the world from earth to sky. What sort of development was required and is required in the society it was only due to the technology which has been made available by man in the society. Our old society is the global society by the latest techniques applied by the man. The new technology has change every sectors of the society and has inserted new method and techniques in every fields of society the sectors in which the technology has excelled, are the health care which promised the care rear to the health of every living things.

The sectors are mentioned where the technology has shown excellence and has brought revolutionized changes. These changes happened in the sectors like agriculture, transportation, flood and disaster management, tourism, trade and commerce, defense and army, information technology, communication election system and it has also attracted the thinking of humanity in a unique ways. It has revolutionized the education system of the

world. Technology has removed differences between old classroom and new classroom and today is the smart classroom conversion of distance education system schooling throughout the universities.

Literatures through Technology

Literature means any written works and the literature originally was only written piece but along with the time it turned into different forms like written, oral, sung, or verbal literature. Literature is classified into various genres like fiction, nonfiction, prose, poetry, dramas and short stories. Literature is considered the records of the society and events of the social life of the world. The change in the world is due to the change of new techniques in the literature and new methods applied around the world. Chaucer to the Post Modernist and up to the contemporary literature and all these authors ranging from the Chaucer's age has shown technology in various forms in the literature. These writers depicted technology as their subject matter and same has been shown as a service of transformation to the humanity. The transformation technology brought has positive impacts on society in general and literature in particular. In an article published by Gugane, he has mentioned that the technology has brought positive change in the literature.

Since the very existence of literature, technology has been remained a subject of literature. The word technology has its root in Greek word 'techne', means 'craft' or 'making'. Literature being a creation, or making something new, has strong relationship with technology. (GUGANE, 2)

The present scenario of literature is available in different ways and can be accessed through different procedures. The technology has availed now the online system of everything like the system of different online programs like, online study, online portals, online library, online telecasting, websites, Wikipedia, online literature, literature apps, hard copy soft social media social networking data system live classrooms easy access of literature live lecture programmes videos conferences material access downloading system uploading system audio visual aids

Methodology

The methodology for this article has been implemented a descriptive methods and the secondary sources like journal periodicals magazines news papers and articles. The secondary sources have been analysed to prove the study true and came to the results that technology has changed the whole system of the humanity and the whole social circle of human being to

great extend. Apart from the secondary sources, every sector in the society is vivid picture we analyses the study for the purpose of results.

CONCLUSION

In the conclusion we can say that the present society has change and the technology has played a very vital role in all the aspects of society and in all sections of society. Today we can say it that this is technological society and technological literature all these changes occurred only due to the change in the world of science and technology. The present study has shown that the world has been made beautiful by the advancement of technology in every walk of human life. The technology has empowered the one and all and has changed the traditional ideas thinking and has tremendously converted the all impossible old thoughts into possibility. The race of technology has achieved a purposive progress and development of humanity and the structure of the society. It has widened the scope and accessibility of literature and has given a new way to the world of literature. An overview has been structured to examine the process of change occurred in the society and in the literature through technology in the world of today. This is concise and shortened gist of the development in the social life of human being and in the world of literature by technology.
